

POSPAY

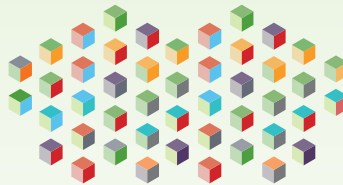

PREVENT CHECK FRAUD WHILE SAVING MONEY

PosPay is a simple solution with a big impact. It is the only Positive Pay solution fully integrated with Financial Edge NXT to protect organizations against check fraud. There is no need to set up export files, run complicated queries, or manually massage your data. Save time and avoid human error by outputting Positive Pay files in the exact format your bank prefers. PosPay works with manual, computer, and payroll checks. Unlike a query or export, PosPay can also scan previous check runs to see if any previously processed checks have subsequently been voided and include that updated check status with the current check run.

PosPay has always been a reliable asset within the classic view of Financial Edge, but as the Sky API grows, users are shifting more of their work to the web view offered in FE NXT. Working together with Blackbaud, we're excited to provide a more convenient way to create Positive Pay files within FE NXT.

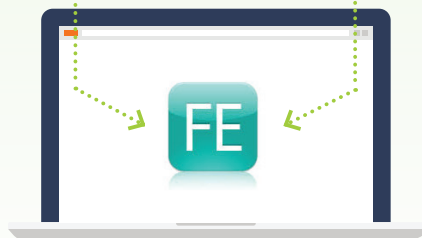

TEMPLATED FORMATS

Free bank template configuration and files in your bank's unique format.

CHECK MEMORY

Notes the last check number and automatically starts with the next.

PROCESS ELIMINATION

No need to run complicated queries or manually massage data.

UNIVERSAL USE

Works efficiently with manual, computer, and payroll checks.
